---

Since release of Joomla 1.5.19 new plug-in is available that allows to load latest [Mootools JavaScript Framework](#)

The plug-in overrides the JHTMLBehavior and loads the new Mootools 1.2.4 Javascript files instead of the version 1.1 files. Compatibility with existing Mootools functionality is preserved using the Mootools compatibility layer. You can read more about this plug-in on [Joomla website](#)

If Joomla CMS (version 1.5.19 or above) is installed for the first time the plug-in will be installed and added to the database automatically. Also, if you update to Joomla 1.5.20 using a patch the plug-in will be automatically installed when you access Admin Control Panel.
